PROFESSIONAL SUMMARY

Operations leader who uses analytics to drive business decisions. 7+ years running multi-site agricultural operations (3 sites, 250+ personnel) and delivering 5 residential build and renovation projects, where planting, staffing, pricing, and financing decisions were made on the data capture systems, KPI targets, and reporting I designed and the teams adopted. Bringing that to business analysis: requirements gathering, process analysis, KPI definition, and executive reporting, backed by SQL, Power BI, Tableau, and advanced Excel. STEM-designated Master of Science in Business Analytics, Hult International Business School, August 2026.

EDUCATION

Hult International Business School Master of Science in Business Analytics, STEM-Designated. GPA 3.44/4.0. Dean's List, Spring 2026. Boston, MA | Aug 2026

Chinhoyi University of Technology Bachelor of Engineering in Mechatronics. Zimbabwe | June 2016

EXPERIENCE

Operations Lead **April 2021 - August 2025**

Thinnoff Investments *Harare, Zimbabwe*

- Delivered 5 residential projects end to end (2 ground-up builds, 3 full renovations of dilapidated properties in high-value areas), owning scope, budget, and schedule from acquisition through sale, and directly managing 25 trades personnel across 6 disciplines
- Achieved 35% average ROI across the 5 cycles by building the acquisition business case, tracking actual vs budgeted spend per project in Excel, and pricing sales off reconciled total cost
- Improved sales velocity by defining the listing-funnel metrics the business would track (impressions, enquiries, days-on-market) and building the month-over-month reporting that timed listings toward high-demand windows

Operations Director **February 2018 - April 2021**

Weird Leaf Investments (later renamed Waterbessie Investments) *Harare, Zimbabwe*

- Drove planting, input, and staffing decisions for 250+ seasonal staff by consolidating site-level production, labour, and compliance data into a standardised operating report pack for leadership
- Established daily visibility into production, labour, and inventory across 3 sites by gathering requirements from site stakeholders, designing the data capture and reporting system around them, and writing the procedures
- Improved operational yield by more than 25% against regional benchmarks by defining crop-level KPI targets (tobacco 3.5 t/ha, seed maize 4 t/ha) and reporting site performance and variance against them; marketed 175+ tons of tobacco in 2020
- Negotiated a US$750K seasonal financing budget for a 100 ha tobacco crop, holding US$7,500/ha cost through revisions
- Drove adoption among site clerks with no analytics background through training and ongoing guidance, and reconciled a US$500K+ financing facility line by line against contractor statements

ANALYTICS CONSULTING ENGAGEMENTS

New England Revolution - Fan Segment & NLP Analysis **Summer 2026**

Hult Applied Consulting | github.com/cnyoka/revolution-nlp-analysis

- Tested and disproved a client growth assumption around the 2026 World Cup (0.7% mention rate) by building an NLP pipeline in R over 6,572 public fan documents using sentiment lexicons, LDA topic modeling, and TF-IDF
- Located the fan sentiment problem in service touchpoints, not match content: app store 65% and ticketing 78% negative

White Glove Delivery Route Optimization **Spring 2026**

RH x Hult BI Capstone | github.com/cnyoka/rh-delivery-optimization | Tableau dashboard (live)

- Recommended RH keep the $299 delivery fee as a brand anchor in an executive memo, citing a $632 average cost per order
- Delivered a 6-page Power BI dashboard against stakeholder-defined requirements (loading manifest, route visualization, cost summary, CO2 tracking) on a live SharePoint pipeline using Power Query and DAX
- Cut estimated delivery emissions 7.5% (715 to 661 kg CO2) by replacing a manual routing and costing process with a cost-minimization model in Python (OR-Tools) across 19 customer orders

TECHNICAL PROJECTS

Customer Churn Prediction - UK Online Retailer | github.com/cnyoka/churn-prediction-r **Spring 2026**

- Identified at-risk customers at 74.3% sensitivity (72.4% accuracy, 0.797 AUC) by building a churn model in R on 805K retail transactions (5,038 customers) using RFM features and temporal validation
- Selected logistic regression over a higher-accuracy decision tree on churner-detection cost analysis, and delivered an executive brief with a monthly scoring plan and re-engagement triggers

Cloud Data Platforms - Microsoft Azure and Snowflake **Fall 2025**

- Recommended Snowflake over Azure Synapse for cost-sensitive workloads after a pricing and scalability cost-benefit analysis
- Provisioned an Azure MySQL server and delivered an executive market summary from SQL analysis of DOL LCA filings

SKILLS

Business Analysis: Requirements Gathering, Business Process Analysis, Process Improvement, Root Cause Analysis, Stakeholder Management, Change Adoption, Executive Reporting, Data Storytelling
Analytics and BI: SQL (Joins, CTEs, Window Functions), MySQL, Excel (Advanced), Power BI (DAX, Power Query), Tableau, KPI Development, Dashboard Development, Data Validation, Exploratory Data Analysis, Statistical Analysis
Programming and Data: Python (Pandas, NumPy, Scikit-learn, OR-Tools), R, ETL, Snowflake, Microsoft Azure, MongoDB, Git
Certifications: Google AI Professional Certificate (2026); THRIVE with AI: Mastering AI for Leadership, Hult (2026)
