PROFESSIONAL SUMMARY

Data analyst with a STEM-designated Master of Science in Business Analytics (Hult International Business School, August 2026) and an engineering degree. Builds predictive models, NLP pipelines, optimization models, and dashboards in Python, R, SQL, Power BI, and Tableau, including client projects for RH and the New England Revolution. Brings 7 years of hands-on business data experience: designed the data capture and KPI reporting for a 3-site agricultural business and the cost tracking behind 5 real estate development projects.

EDUCATION

Hult International Business School Master of Science in Business Analytics, STEM-Designated. GPA 3.44/4.0. Dean's List, Spring 2026. Boston, MA | Aug 2026

Chinhoyi University of Technology Bachelor of Engineering in Mechatronics. Zimbabwe | June 2016

ANALYTICS PROJECTS

New England Revolution - Fan Segment & NLP Analysis **Summer 2026**

Hult Applied Consulting | github.com/cnyoka/revolution-nlp-analysis

- Tested and disproved a client growth assumption around the 2026 World Cup (0.7% mention rate) by building an NLP pipeline in R over 6,572 public fan documents using sentiment lexicons, LDA topic modeling, and TF-IDF
- Located the fan sentiment problem in service touchpoints, not match content: app store 65% and ticketing 78% negative

White Glove Delivery Route Optimization **Spring 2026**

RH x Hult BI Capstone | github.com/cnyoka/rh-delivery-optimization | Tableau dashboard (live)

- Cut estimated delivery emissions 7.5% (715 to 661 kg CO2) by building a cost-minimization route model in Python (OR-Tools) on Google Maps Distance Matrix API road distances across 19 customer orders
- Delivered a 6-page Power BI dashboard (LIFO loading manifest, route visualization, cost summary, CO2 tracking) on a live SharePoint pipeline using Power Query and DAX
- Recommended RH keep the $299 delivery fee as a brand anchor in an executive memo, citing a $632 average cost per order

Customer Churn Prediction - UK Online Retailer | github.com/cnyoka/churn-prediction-r **Spring 2026**

- Identified at-risk customers at 74.3% sensitivity (72.4% accuracy, 0.797 AUC) by building a churn model in R on 805K retail transactions (5,038 customers) using RFM features and temporal validation
- Selected logistic regression over a higher-accuracy decision tree on churner-detection cost analysis, and delivered an executive brief with a monthly scoring plan and 90-day re-engagement triggers

Urban Heat Island Prediction from Sentinel-2 Imagery | github.com/cnyoka/uhi-sentinel2-prediction **Spring 2026**

- Engineered 396 features from Sentinel-2 imagery and built a LightGBM ensemble reaching a cross-validated F1 of 0.92 against a 0.40 baseline (team version: 0.87 against independent ground truth), explained with SHAP

Cloud Data Platforms - Microsoft Azure and Snowflake **Fall 2025**

- Provisioned an Azure MySQL server and queried DOL LCA filings by state, employer, and job title (CTEs, window functions)
- Loaded an 11-table Netflix schema into Snowflake and ranked countries by title popularity, using regex data validation

EXPERIENCE

Operations Lead **April 2021 - August 2025**

Thinnoff Investments *Harare, Zimbabwe*

- Achieved 35% average ROI across 5 residential development projects by building the acquisition business case, tracking actual vs budgeted spend per project in Excel, and pricing sales off reconciled total cost
- Improved sales velocity with Excel listing-funnel metrics (impressions, enquiries, days-on-market) and monthly trend reports

Operations Director **February 2018 - April 2021**

Weird Leaf Investments (later renamed Waterbessie Investments) *Harare, Zimbabwe*

- Established daily visibility into production, labour, and inventory across 3 farm sites by designing the operation's data capture and reporting system and training site clerks on source-entry validation
- Consolidated site-level production, labour, and compliance data into a standardised report pack that informed planting, input, and staffing decisions for 250+ seasonal staff
- Improved operational yield by more than 25% against regional benchmarks by setting crop-level KPI targets (tobacco 3.5 t/ha, seed maize 4 t/ha) and tracking site performance against them; marketed 175+ tons of tobacco in 2020
- Modelled a US$750K seasonal financing requirement for a 100 ha tobacco crop in a monthly Excel cash flow at US$7,500/ha

SKILLS

Analytics and BI: SQL (Joins, CTEs, Window Functions), MySQL, Excel (Advanced), Data Cleaning, Data Validation, Exploratory Data Analysis, Power BI (DAX, Power Query), Tableau, KPI Development, Dashboard Development

Programming and Data: Python (Pandas, NumPy, Scikit-learn, LightGBM, OR-Tools), R, Predictive Modeling, NLP (Sentiment, LDA, TF-IDF), Statistical Analysis, ETL, Snowflake, Microsoft Azure (Azure Database for MySQL), MongoDB, Git

Business Analysis: Requirements Gathering, Business Process Analysis, Root Cause Analysis, Stakeholder Management, Executive Reporting, Data Storytelling

Certifications: Google AI Professional Certificate (2026); THRIVE with AI: Mastering AI for Leadership, Hult (2026)
